**EDUCATION**

1989 - 1995	University of California at Berkeley, Department of Molecular and Cell Biology	Ph.D.	Immunology
1985 - 1989	University of Illinois, School of Liberal Arts and Sciences	B.S.	Honors Biology and Chemistry.
1987 - 1988	University College, London, England	Exchange Student	Department of Chemistry
1980 - 1985	University of Illinois High School, Urbana, Illinois		

**PRINCIPAL POSITIONS HELD**

2015 - 2016	Mediterranean Institute for Advanced Studies, Aix-Marseille University, France	Visiting Sabbatical Scholar	
2012 - present	University of California at San Francisco	Professor	Department of Pathology
2008 - 2009	Institut Curie. Paris, France	Visiting Sabbatical Scholar	Cancer
2006 - present	University of California at San Francisco	Faculty Director	Biological Imaging Development Center

2006 - 2011	University of California at San Francisco	Associate Professor	Department of Pathology
2001 - 2006	University of California at San Francisco	Assistant Professor	Department of Pathology
1997 - 2001	Beckman Institute, Stanford University. Advisor: Dr. Mark M. Davis	Postdoctoral Fellow	HHMI
1996 - 1997	Walter and Eliza Hall Institute, Melbourne Australia. Advisors: Dr. Bill Heath and Dr. Ken Shortman	Postdoctoral Fellow	Dendritic Cell Biology
1995 - 1996	UC Berkeley. Advisor: Dr. James P. Allison	Postdoctoral Fellow	MCB
1989 - 1995	UC Berkeley. Advisor: Dr. James Allison	Graduate Research Assistant	MCB
1988 - 1988	UGM, Institut Pasteur. Advisors: Dr. Julian Davies and Dr. Tom Holt	Stagiare (Technician)	UGM
1987 - 1987	UTHSC Dallas. Advisor: Dr. Flora Katz	HHMI Summer Fellow	Neurobiology

## HONORS AND AWARDS

2016	Robert E. Smith Endowed Chair in Experimental Pathology
2013	Pediatrics FLAG Mentorship Award, University of California, San Francisco
2009	Fellow of the American Asthma Foundation
2005	Leukemia and Lymphoma Foundation, Career Award
2004	Cancer Research Institute, Investigator Award
1997	NRSA Postdoctoral Fellowship, National Institutes of Health
1996	Postdoctoral Fellowship, Juvenile Diabetes Foundation International
1989	Luce scholars competition finalist, Henry Luce Foundation
1986	James scholar, University of Illinois
1985	Illinois State Scholar, National Merit scholar, Westinghouse Science Award

### **KEYWORDS/AREAS OF INTEREST**

Immunity, Tolerance, Cell-Cell Interactions, T cell synapse, Cell motility, Multicellular systems  
Tumor Immunology, Immune regulation, Immunotherapy  
Lung Immunity, asthma, lung metastasis

### **CLINICAL ACTIVITIES SUMMARY**

### **SERVICE ACTIVITIES SUMMARY**

I continue to serve the community as the faculty leader in charge of bringing microscopy methods and expertise to the PH campus. I also continue to serve the BMS program, serving as an adviser as well as leading the grant-writing workshop (which had a record 17 awards in 2013). I serve on the RAP technology committee and on multiple faculty search committees.

### **TEACHING SUMMARY**

Since joining the UCSF faculty, I have participated in graduate education at five levels:

1.) Course Director: Together with Frances Brodsky, I organized and led an advanced seminar course (Advanced Immunology, BMS 209, 2003) on the topic of Cell Biology of Leukocyte

Interfaces . This entailed putting together a syllabus and reading list and supervising the students in their presentations of research papers on relevant topics. In 2009, I was (with Walter Finkbeiner) de facto course organizer for BMS225B, responsible for overall course organization and assembling and grading exams.

2.) Discussion Leader: For many of the past 12 years, I have acted as a discussion leader for graduate level Cell Biology and Immunology courses (BMS 260 and 204 respectively). For these courses, I led students in weekly 2-hour discussions of research literature. For Cell Biology, this also entailed meeting with students individually to discuss their end-of-quarter grant-proposals, holding an oral-exam on these proposals, and grading their written work.

3.) Team-Teaching : I have participated as a lecturer for various BMS and PIBS courses. This typically entails preparing a selection of lectures for team-taught courses. For example, in the recent quarter, I gave lectures for 225A on Advanced Microscopy and for the last few years I've taught a lecture on 2-photon microscopy for PIBS students and in the UCSF Imaging course. Other courses/topics over the past years have included BMS265: Receptor-Ligand Interactions and BMS225B: Lymph node development. In 2009, for BMS225a, we added a 'practical' section which includes lab sessions that introduce students to confocal and/or 2-photon microscopy and I continue to oversee this via the Biological Imaging Development Center (BIDC), a facility that I oversee. For the past three years I have taught lectures in BMS230, the Cancer biology course--with a focus on cancer immunology.

4.) Medical School Immunology: Over most of my time at UCSF, I have led discussions for the Medical School Immunology I3 course and prologue. I will do so again this year. This entails leading students in presenting relevant primary literature relevant to topics covered in the lecture series. This has differed somewhat from 2.) above insofar as students typically are more interested in clinical relevance of basic science.

5. Recurring Lectures for Incoming Graduate Students: Since 2006, I have organized a lecture and mentoring program for incoming graduate students to help them assemble and write their NSF fellowship proposals. This includes an introductory lecture on 'How to Write a Fundable Grant' and follow-up meetings with volunteer graduate students and faculty to help students fine-tune their work. Beyond the one-day course and mentoring, we provide faculty and student-led mentoring throughout the submission process. This produced a record 14 awardees in 2012 and 12 in 2013.

### INFORMAL TEACHING

2002 - present 30 hours per week supervising thesis work and postdoctoral training for 8-14 individuals. This includes practical lab training as well as one-on-one discussions of data and lab meetings

### MENTORING SUMMARY

I continue to actively mentor between 8 and 10 graduate students and postdocs in my lab each year. One postdoc is currently entertaining an offer of a faculty position at Oxford University and my most recent graduate student has gone on to co-found a small biotech company.

**RESEARCH AND CREATIVE ACTIVITIES SUMMARY**

My lab is focused on the spatio-temporal organization of the immune response. We utilize and develop light-based imaging technologies for these analyses. Much of this work has centered on uncovering the controls and organization of immunological synapses: structures which transiently form and permit cell-cell signaling and information exchange between immune cells and other immune cells. In the recent 5 years, we have developed a sub-specialty in the development of tools for subcellular-level imaging of tissues and organs in situ in order to discover how components of the immune system are working in situ.

11.	U01CA217864  NIH/NCI Integrating targeted and immunotherapy to treat genetically heterogeneous cancers	co PI	8/17/2017 \$ 224,104 direct/yr 1	Balmain, Krummel, Weiss (PI) 7/31/2022 \$ 1,065,613 total
The goal of this project is to perform crispr screens in monocytes and T cells to identify genes associated with tumor entry and function in two distinct tumor types. Will use genetic or pharmacological perturbation of newly generated candidate genes involved in metabolic stress and ros-induced DNA damage to increase mutation load and antigen abundance in a tumor-specific manner, leading to improved responses to IMT. Will also exploit gene expression networks to identify druggable targets and pathways that augment immune responses.

PI: In this work, we used a novel set of live-imaging approaches that we developed (see *Nature Methods* 2012) in order to track the first steps in tumor metastasis. The results provide the first evidence for seeding of the lung with tumor microparticles which pass into immune cells which, in turn, modulates metastatic success.

PI: In this work we identified a key intratumoral immune cell type that is necessary for T cell responses to tumor and showed that its abundance predicts outcome in human cancer patients. This cell type is now extensively under study as a method to complement T cell immunotherapies. (see also *Cancer Cell* 2016)

DOI: 10.1016/j.cell.2014.05.044. PMID: PMC4119593

PI: In this work, we identified a 'steering' motor in cells that forces them to make periodic turns. We further went on to use this as model to show how T cells efficiently scan tissues.

PI: In this work, we showed how T cells profit from intracloonal interactions, mediated by hive-like clusters. This represents a previously unrecognized synaptic platform for molding the immune response.

PI: In this work, we demonstrated the concurrence of signaling T cell receptor microclusters on the T cell surface and how this type of signaling can concur in time with ongoing motility as a transient synapse is formed. We also demonstrated how actin movements are utilized to coordinate these two seemingly-disparate activities.
